NON-SURGICAL CHIN LIFT

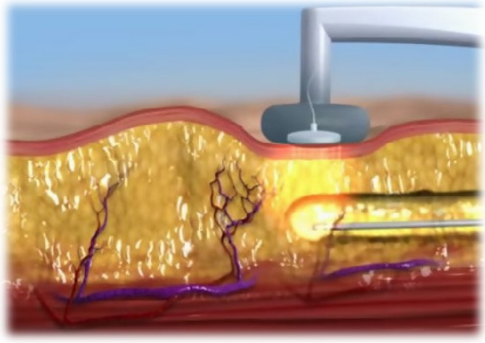

SURGICAL RESULTS WITHOUT SURGERY

Eliminates the "double chin"

Enhances the jawline and tightens skin

FACE *tite* provides a safe and effective alternative to a traditional surgical facelift, without the anesthesia, scarring or downtime. FaceTite is a radio frequency energy facial rejuvenation procedure that melts fat, stimulates collagen production, tightens and firms skin. FaceTite greatly improves the face and neck silhouette with just one in-office treatment.

Dr. Imami's proprietary technique blends Liposuction to create results similar to traditional double chin surgery without invasive surgery.

FREQUENTLY ASKED QUESTIONS

AM I A GOOD CANDIDATE FOR THE PROCEDURE ?

This treatment is perfect for someone who wants to eliminate the double chin and enhance the jawline. This is ideal for individuals who are candidates for double chin surgery, but do not want visible scars, undergo traditional surgery with general anesthesia or experience longer downtime.

IS THE PROCEDURE PAINFUL ?

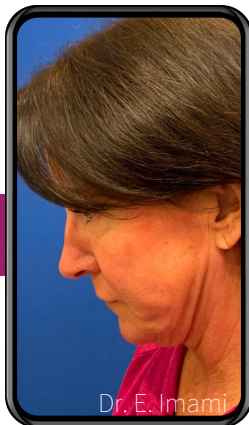

We'll apply local anesthetic or if it's a part of a larger treatment, full anesthesia, so you shouldn't feel any discomfort while the treatment is being performed.

WHAT IS THE DOWNTIME ?

You may shower and resume most activities within 48 hours. Mild swelling, redness, small scabs or minor bruising may be seen for up to five days. We recommend icing for 72 hours and a compression garment for two weeks to minimize swelling.

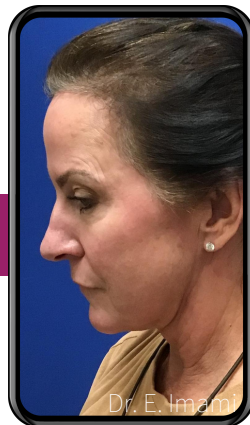

WHEN WILL I SEE RESULTS ?

Results can be seen after a few days, with best results noticeable after 6 weeks and continuing to improve up to 6 months.
