NON-SURGICAL TUMMY TUCK

SURGICAL RESULTS WITHOUT SURGERY

Contours the abdomen

Removes unwanted abdominal "pooch" fat

Reduces stretch marks and tightens skin

 **BeautiFill** is Laser-assisted Liposuction that gently and permanently removes stubborn unwanted fat cells to improve your abdominal contour.

BODYtite is a Radio Frequency energy procedure that melts fat, tightens skin, improves stretch marks, and builds collagen.

MORPHEUS *body* microneedling utilizes the latest Fractional Radio Frequency technology to further tighten skin, and reduce subcutaneous fat while building collagen.

Dr. Imami's proprietary in-office technique blends these state-of-the-art technologies to create results similar to a traditional tummy tuck, without invasive surgery or lengthy downtime.

 **BeautiFill** + **BODYtite** + **MORPHEUS** *body*

NON-SURGICAL TUMMY TUCK

FREQUENTLY ASKED QUESTIONS

AM I A GOOD CANDIDATE FOR THE PROCEDURE?

Good candidates are generally healthy and are near their ideal body weight. This procedure is ideal for individuals who are candidates for traditional tummy tuck surgery but do not want to undergo surgery with general anesthesia or experience longer downtime.

IS THE PROCEDURE PAINFUL?

This is a well-tolerated in-office procedure. By using light sedation, "laughing gas" and lidocaine, there is minimal discomfort with prompt recovery.

WHAT IS THE DOWNTIME?

For the first 48 hours, you should avoid driving and you will need assistance at home. You may shower after 48 hours. For 2-3 weeks, you should avoid exercise or strenuous activities since there may be mild swelling, tenderness and perhaps bruising. Compression garments should be worn for 6 weeks.

WHEN WILL I SEE RESULTS?

Though results are apparent within days, it usually takes about 3 months to see final results as the area heals and the swelling resolves.
